FOREST RESTORATION IN GALICIA

The project area is located in the Ribadetea Community Forest, which covers 380 hectares, situated in the upper area of the “Laxe da Cruz” quarry. The forest is managed according to its management plan and holds PEFC and FSC certifications. The project activities consist of the reforestation of the degraded area, with a projected absorption of 13,727 tCO₂e over 30 years (currently 2,742 tCO₂e are available).

Unit: tCO₂e absorption.

Main benefits associated with the project

- ✓ **Environmental benefits:** The project promotes reduction of erosion and conservation of biodiversity. The plantation uses plants that comply with established legislation; these are selected and improved varieties.
- ✓ **Social benefits:** Job creation in the area.
