

Promoting green economic growth through numerous renewable energy projects in various parts of China.

Generating wind power in Heilongjiang by installing 27 wind turbines with a total capacity of 48.9 MW, to supply an average of 110,520.5 MWh to the grid every year.

Hydroelectric power generation in Guizhou thanks to a hydroelectric power plant with a capacity of 120 MW on the Mengjiang River, which will supply 447,670 MWh per year.

Biomass electricity produced from waste in Henan, with an installed capacity of 24 MW that will generate up to 119,381 MWh of electricity every year.

UNIT: CER (Certified Emission Reduction) accredited under the UNFCCC (United Nations Framework Convention on Climate Change).

### Main benefits associated with the project

- ✓ It strengthens the local economy, reducing dependence on fossil fuel consumption. Increased commercial activity thanks to the clean, renewable energy.
- ✓ Reduction in the use of fossil fuels and increase in the use of local resources.
- ✓ Increase in the region's electricity supply, by supplying clean energy to the grid. This project will support the sustainable development of the region.
- ✓ Creation of direct and indirect jobs for the local population, offering business opportunities to local stakeholders.
